Saturn Cubicles

The strong curved aluminium profiles and colour co-ordinated panels, produce a more striking visual effect.

Saturn's unique design allows inward and outward opening cubicles to be side by side. This provides the ability to incorporate 'Disabled' cubicles without altering the external appearance

The Saturn indicator bolt is also easily operated by people of all ages and abilities

An optional security 'anti-vandal' fixing kit is available for areas prone to vandalism

offices

restaurants

hospitals

health clubs

leisure centres

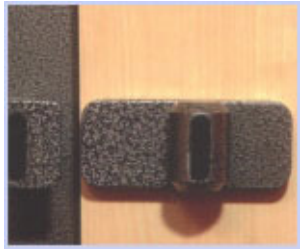

colleges & universities

swimming pools

Saturn Cubicles - Technical Specifications

New Challenger cubicle hardware is the most comprehensive range of cubicle fittings available in the UK. Designed using the latest solid works 3D design and modeling software Challenger combines aesthetics with quality, durability and reliability.

INDICATOR BOLT

Easy to install and with no visible fixings, this vandal proof bolt is easily operated by children, the elderly and people with disabilities. A large handle slides easily from left to right with our the need for a firm finger grip. An internal sprung loaded bearing ensures a long life without 'rattling'.

The bolt incorporates an external 'coin-release' mechanism for access in case of emergency.

FASCIA PROFILES

The elegant curvature of the fascia profiles offers a truly sublime & individual appearance.

Optional fascia heights are available that are securely fixed at the top to a unique headrail system and to the floor via an integral supporting leg or a unique fascia base which encapsulates the contours of the fascia through to the floor level.both floor fixing options have built in adjustment features which offer maximum flexibility when dealing with uneven floors during installation.

HEADRAIL

Complimenting the fascias, the curved headrail runs the full length of the cubicles.

Specially designed cast jointing mandrels ensure no ugly joints, and the open ends are capped with a stylish end cap.

PARTITION BRACKETS

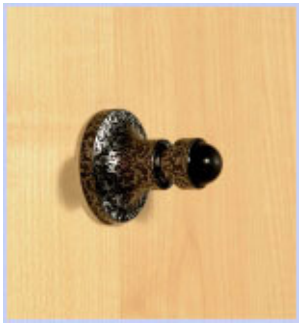

Three-Dimensional brackets similar in shape to the lock face, locate the partitions to the wall and fascia.

Flush fixing bolts complete the joint.

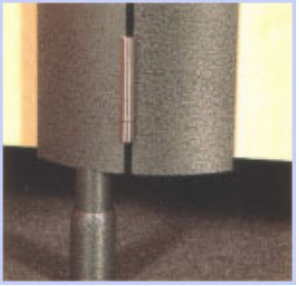

HINGES

the doors are mounted on colour co-ordinated rise and fall butt hinges that enable the door to be opened smoothly, allowing it to fall open or closed when the cubicle is not in use.

COAT HOOK

A three-dimensional coat hook complete with hidden fixings completes the system

OUTWARD OPENING DOORS

A unique design allows the fascia to hinge on its centreline, when the door is closed the fascia looks identical to the non-hinged fascias and does not impair the overall appearance of the system.
